

Practical / tabletop task

Monitoring vital signs

Ambassador notes

This task could be incorporated with a talk or session on a horse or radiography-related topic.

The difficulty of the terms used should be tailored to the age-group of the audience, and you can take out any more difficult terms and add simpler ones depending on your needs.

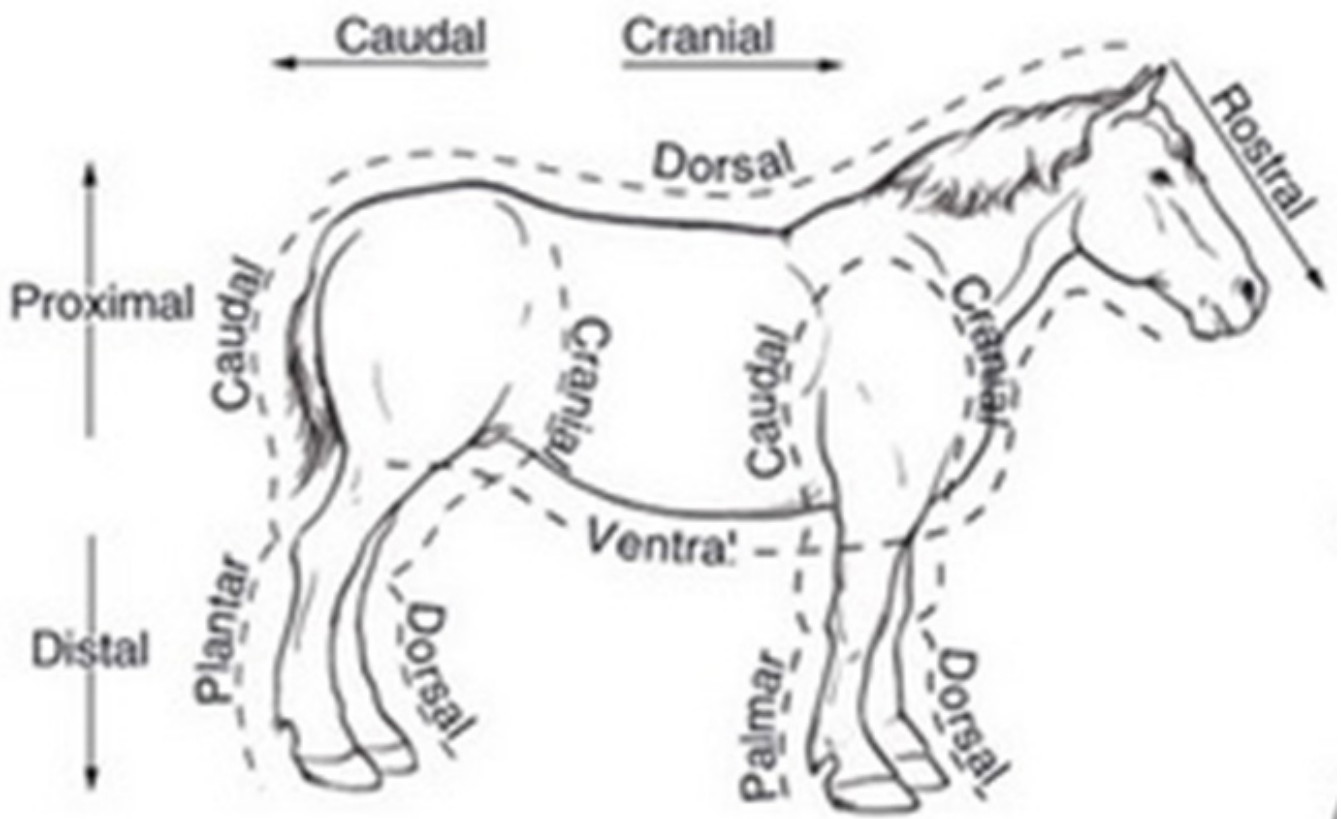

You can expand upon and discuss the terms as you work through this task.

Ask questions and invite discussion to make the task more memorable.

Get them to identify the same positioning and orientation terms on their bodies. You could also talk about (and demonstrate on example radiographs) why we need at least two views of a radiograph to have an accurate picture.
